## Case Study

### Cleveland Hospital London wireless time system

Cleveland Hospital central London is a brand-new private hospital in converted buildings. Andy Gill, Project manager for main builders, Grattes explains the benefits they found from using a wireless clocks system.

#### What was the challenge you were looking to overcome initially?

“Patients who were admitted to the hospital were of different age groups with varying levels of eyesight. The challenge was to have accurate time in a digital and analogue format, easily read from a distance that suited all.”

#### What system was installed?

The Airtime wireless clocks system using mains operated analogue and combined analogue and LCD digital clocks were specified to enable clear viewing of time. The dual analogue/LCD clocks were used in patient rooms and analogue 30cm clocks were installed in surgical, treatment and waiting rooms. Repeaters were installed on each of the 7 floors to enable 100% signal coverage and a transmitter with GPS was installed on floor 5, the GPS antenna was installed on the roof. 100% signal coverage was guaranteed across the building.

#### What are the benefits of the equipment for the hospital?

“100% time accuracy with automatic seasonal time changes. The patients have time displays and part of day in a digital and analogue format for clear visible reading.”

Could your premises benefit from a synchronised clocks system?
